

Plastics Mold Design Engineering Manager

A leading, world-class, plastic injection mold maker, located in Northwestern Pennsylvania is looking for a Design Engineer Manager. In addition to supervising 12+ mold designers, the candidate will be expected to assist in coordinating engineering and related product development activities necessary to design high cavitation, high quality plastic injection molds. The candidate must also be knowledgeable in multi-component injection molds and hot runner design. A working knowledge of ProE CAD software is required. Experience in the Telecommunication, Pharmaceutical and a Consumer-Packaging industry is preferred. The candidate must have a college degree and a minimum of 5 years design experience. Prior management experience is preferred.

We offer an excellent career opportunity to work for a world-class multi-national manufacturing company with a competitive salary, benefits and relocation package. Qualified candidates are encouraged to respond to this posting with their resume and salary requirements.
